

DATASTOP®

HIGH TRANSPARENT EMI SHIELDING

INTEGRATED IN CRYSTAL ARMOR™ BULLETRRESISTANT TRANPARENTS

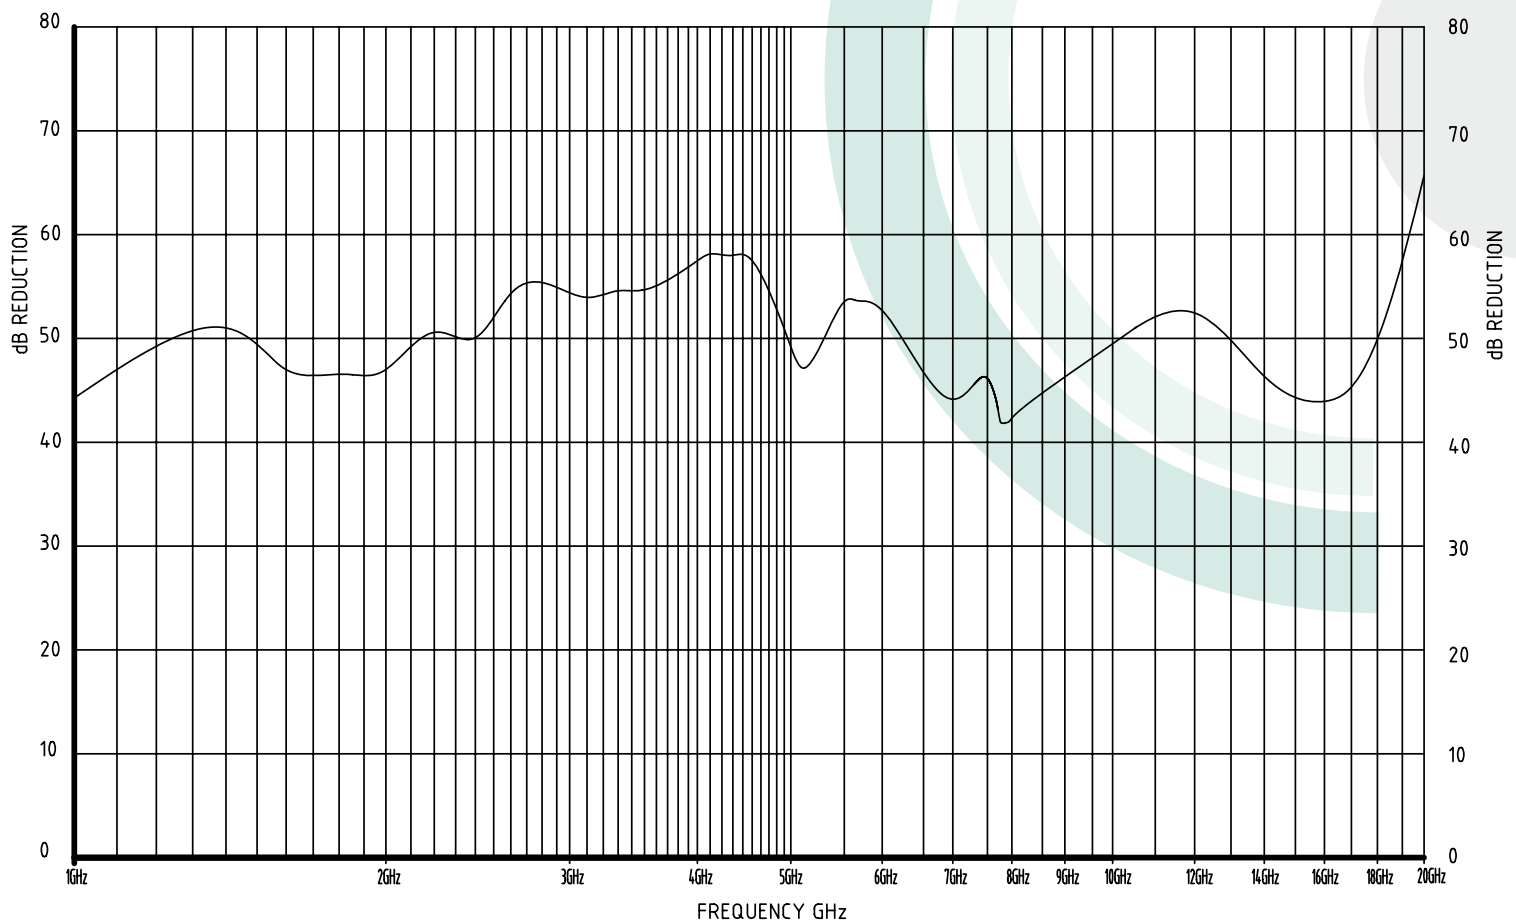

The signal attenuation of Datastop is achieved by the use of several layers of specially developed coatings which are effective in the electrical field by reflection of the signal and the electrical connection at the glass edge.

This layers are integrated in our armored transparent and will not affect the optical quality or light transmission. Datastop is available in various attenuations for different frequencies.

ADVANTAGES

- Good electrical attenuation over a wide range of frequencies
- Good optical quality
- Easy edge connection methods
- Good light transmission
- Low solar heat transmission
- High thermal insulation
- No obstructive mesh

Example of attenuation

TESTING PERFORMED IN ACCORDANCE WITH MIL STD 285 SPECIFICATION
